

Preventive Maintenance MES 1

Seminar objective

The vehicle with the easy-to-operate and reliable ROTZLER winch unit makes the operator feel safe.

To make sure that this stays the same in future, and that the annual accident prevention inspection is performed without complaints, you can perform preventive maintenance yourself continually.

Target Group

Operators of winches of the ROTZLER TREIBMATIC and HZ series.

Operators and maintenance staff, e.g. at fire brigades.

Benefits

You know the properties of a ROTZLER winch unit in the vehicle. You are familiar with the functions - from the hydraulic system to the special features of a rope guidance to use of all accessories such as facilities for double pull.

You have learned safe extension and retraction of the wire rope and perform the common cleaning and care work yourself.

Additionally, you will learn everything about the causes of possible status and error messages on the operating unit.

Educational objectives

- Safety, operating manual, service manual and spare parts list
- Overview of the rope winch unit
- Hydraulic system
- Operating unit
- Rope
- Checking sensors and setting the monitoring switches
- How can rope damage be avoided?
- How to recognize simple malfunctions?

Performances and contributions of the participant

For trainings performed at the customer's site:

- Vehicle ready for inspection and road licensing
- Vehicle with good access to the winch and rope course
- Training room with projector and workshop environment with pit

Appointment

by agreement

time required ca. 3-12 hours

Venue

at customers premise
(alternatively at Steinen)

Attendance

maximum 12 participants
