

## Recovery and Rescue Solutions

ROTZLER ist one of the leading manufacturers of winch systems and accessories for recovery and rescue operations. With our hydraulic winches, rescue services can reliably recover vehicles or quickly remove barriers. Maximum security, user-friendly operation and a long lifespan are just some characteristics of our products.

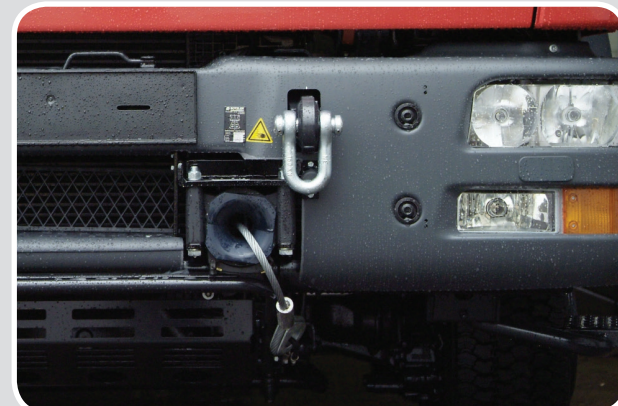

Within our wide product range we offer the TREIBMATIC recovery winch. With a constant pulling force and constant rope speed over the entire rope length, it is a high-performance pulling equipment for fire brigades. We meet the highest safety standards of DIN 14584 and additionally offer the appropriate accessories for rope deflection, duplication of the pulling force, vehicle protection and much more.

Both standard products and custom designs for custom vehicle constructions are available for various applications. The modular and compact design of ROTZLER winches allow flexible integration into different vehicles. On request, we provide our customers with the vehicle installation and services from the planning to completion of a project through to seminars, training as well as repair and spare parts service.

### Perfect Integration of ROTZLER winches

Experienced designers and construction teams ensure the perfect integration of hydraulic winches with recovery and self-recovery vehicles:

- Fire-fighting vehicles
- Rescue and equipment vehicles
- Crane vehicles
- Special-purpose vehicles
- Commercial utility vehicles

## Applications

### Emergency and fire-fighting vehicles

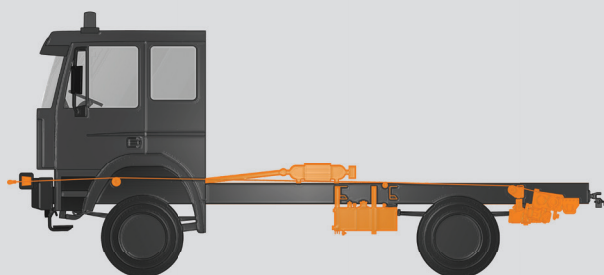

ROTZLER creates customized winch installations for fire and rescue vehicles of all types. The made to measure winches are integrated into the chassis. For special vehicles such as truck chassis with load handling systems, winches are available as a side-mounted option. The high-performance pulling equipment makes these vehicles flexible all-rounder for ambitious recovery and rescue missions.

### Recovery and crane vehicles

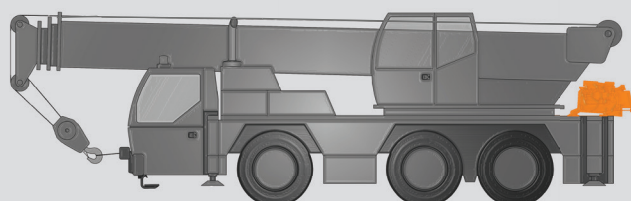

For rescue operations or recovery of rail and road vehicles, the robust ROTZLER winches are indispensable aids for heavy transport. Compact winches on cranes with different hoisting power and recovery winches with high pulling force provide the vehicles with a flexible and powerful working platform.

### Municipal utility vehicles

In the municipal sector commercial utility vehicles are in daily use, for example for the creation and restoration of power supply systems or line and cable construction. In all areas of application you can rely on the quality and reliability of ROTZLER winches. The compact and space-saving construction optimally adapts to various types of vehicles and is available with different pulling force.
